Figure 6. The effect of the initial concentration of the monomer (C_0) on the polymerization rate at different temperatures. The reaction conditions were: $[AIBN] = 0.005 \text{ mol/L}$, $[M] = 0.05 \text{ mol/L}$, $[K_2S_2O_8] = 0.005 \text{ mol/L}$, $[H_2O] = 0.945 \text{ mol/L}$.
